

DXC Signal Private LTE and 5G

Use private networks to transform at scale

- More flexibility
- Increased security
- Maximum scalability
- Improved performance
- Expanded access

Unlock network potential to improve the bottom line.

Optimize processes and improve efficiency to invest in innovation.

Private wireless networks are how oil and gas digitalization happens

Reduce complexity and accelerate time to value with DXC Signal.

In today's volatile energy market, oil and gas companies face momentous challenges in meeting demand while transforming their operations to deliver profitability, improve safety, attain ecosustainability and prepare for the energy transition. They need reliable and secure connectivity, from the field to the enterprise.

Robust, pervasive and predictable wireless voice and data connectivity is key to making automation work and driving digital transformation at scale. It enables safer, more productive communications, delivers experience-based networking and enables a new breed of smart digital applications that connect your digital and physical environments and optimize your operations.

Flexibility and security with enterprise-level network ownership and control

A network is just the start. Asset-intensive industries are transforming the way people and machines work together, creating safer, more productive and more sustainable processes.

DXC Technology and Nokia bring together the best network hardware and change management capabilities to drive efficiencies at scale and usher in next-generation business operations. Working with WiFi and existing processes, DXC Signal enables:

- Built-in security and flexibility to democratize data and unlock edge computing, so you can realize the value of investments in analytics, IoT and AI
- New levels of safety and connected and empowered workers
- Lower total cost of ownership for higher network performance, so you can embed analytics and intelligent applications with lower risk
